06-13-12	Fecal Exam (Bring Sample)	06-14-11

Doctor's Instructions

Neuter canine 25-50#

Surgery charges include pre-anesthetic examination, tranquilizer, anesthetic, isoflurane gas anesthesia, hospitalization, nursing care, and suture removal if needed.

- 1) Food-Water: Limit food and water to 1/4 the normal amount for 24 hours. Some dogs will vomit if they eat or drink too much or too fast after surgery. If this happens, take away the food and water for 12 - 24 hours. If the vomiting persists, please contact our clinic.
- 2) Exercise: We realize that it may be difficult to restrict Teddy Bear's exercise. However, you should discourage Teddy Bear from jumping and vigorous activity for a few days after surgery.
- 3) Anesthetic: Each animal recovers from anesthetic at a different rate. Some animals are back to normal within 24 hours, while others take as long as 3 to 4 days to fully recuperate.
- 4) Bleeding: Sometimes a small amount of bleeding may occur at the incision site. This happens because of blood "pooling" underneath the skin. A few drops of blood followed by cessation is normal. Please call the hospital if the bleeding persists.
- 5) Licking the Incision: Animals will often lick the incision site. This is usually due to itching caused by being closely shaven. Occasionally it may be as a result of the suture material. As long as the sutures are not pulled out, this licking is usually harmless. If you feel a problem is developing in this regard, please call the hospital.
- 6) Please notify the hospital if Teddy Bear develops any of the following:
 - a. Vomiting after 24 hours.
 - b. Diarrhea
 - c. Refusal to eat after 24 hours.
 - d. Severe pain.
 - e. Continuous licking or pulling at the sutures.
 - f. There is a change in Teddy Bear's general health or behavior.
